Summary

Senior Frontend Engineer with 8+ years of experience building scalable, data-heavy web applications and design systems in React and TypeScript. Led complex UI platforms including workflow builders, dashboards, and enterprise tooling. Passionate about accessibility, clean architecture, and delivering measurable product impact.

Languages and Technologies

- **Frontend:** React, TypeScript, Next.js, React Native, React Table, MUI, Emotion, Storybook/Chromatic
- **Testing:** Jest, Cypress, React Testing Library
- **Backend/Infra:** Node/Express, GraphQL, SQL/Postgres, AWS, CI/CD (GitHub Actions/CircleCI)
- **Accessibility:** WCAG, screen readers (iOS VoiceOver, Android Talkback, JAWS, NVDA)

Professional Experience

Rewst | Senior Frontend Engineer | Remote

May 2024 - Jan 2026

- Led the initial design and implementation of the Workflow Builder redesign, rebuilding the canvas using React Flow to support scalable, node-based workflow creation. Established core architecture and interaction patterns.
- Led Dashboard redesign efforts including analytics visualizations, workflow summary cards, activity feeds, and a large-scale workflows table.
- Introduced and implemented Storybook for React component standardization and documentation; set up automated deployments via Chromatic enabling visual regression testing and integrated into CI/CD workflows using GitHub Actions.
- Led the redesign and implementation of the Organization Picker, adding functionality for users to disable and delete organizations, significantly improving account management UX.
- Architected a powerful, filterable data table for Dashboard Phase 2 using React Table, adding advanced filtering
- Drove design token and theming migration from Emotion to Material UI to improve consistency and long-term scalability.
- Redesigned the Workflows List and Results List pages to improve searchability and discoverability, implementing advanced filters and a Material UI date range picker.

Tech Holding | Senior Software Engineer | Los Angeles, CA

March 2020 - April 2024

- Modernized Fender's frontend architecture by migrating legacy pages to Next.js, integrating the online web tuner, and switching their video player to video.js
- Delivered major product features including Shop Bundles, Engagement pages, Home 2.0, and Streaks 2.0 using React and feature flags.
- Led a distributed frontend team through code reviews, Cypress test stabilization, and responsive design improvement.
- Migrated legacy React code to TypeScript, built reusable hooks, and integrated Contentful via GraphQL.
- Championed accessibility and analytics, achieving 90+ Lighthouse scores and implementing event tracking with Avo.
- Rebuilt the Tech Holding site using Gatsby and Contentful, adding PrismJS-powered code snippets and managing weekly deployments.

Next Trucking | Product Engineer | El Segundo, CA

October 2019 - January 2020

- Collaborated with Design to create a reusable React-based table component with filtering and pagination and showcased on Storybook's component library.
- Converted ~20% of the component library from Javascript to Typescript.

Walmart Labs | Software Engineer | San Bruno, CA

July 2017 - Sept 2019

- Reduced bundle size by 200 KB by rewriting global header/footer in vanilla JavaScript and removing lodash dependencies.
- Built React-based A/B testing modules contributing to ~2% GMV lift through experimentation infrastructure.
- Improved accessibility and analytics performance, reducing beacon dispatches by 26% and supporting WCAG compliance initiatives.

Education

University of California, Santa Barbara

Bachelor of Arts in Mathematics, minor in Black Studies

Activities: Playing in SF 4.0 USTA Men's Tennis team, ikon pass snowboarder, Super Smash Bros local tournament competitor
